

Geography – Volcanoes.

Lesson 1 - Have a look through the different links I have provided and read through the PowerPoint. Learn about volcanoes through your research and find out what causes a volcano to form and erupt, then fill in the first worksheet. Can you also work out what the different volcanic terms mean? For the second sheet I want you to research the different parts of a volcano and label the diagram provided.

Lesson 2 – Create your own volcano - Volcanic eruptions are one of the most powerful natural forces on our planet. Making your own miniature erupting volcano is a great, safe way to start learning about these incredible geological features. Follow one of the different guides I've provided and film /take a photo of your work.
